Mortality in the Netherlands: In 2022, 170 thousand deaths were recorded, 14.5 thousand (9.3%) more than expected. Although in 2022, excess mortality was slightly lower than in 2021 and 2020, it was significantly higher than in years with severe flu waves (e.g. 2015 and 2018).

In 2021 and 2020, mortality from C19 was higher than EM. In 2022 – for which causes of death are known up to incl sept – mortality from C19 was slightly lower than EM in the first 3 quarters. In total, corona mortality (until Sept 22) is even higher than the EM (until Dec 22).

Ruben van Gaalen @rubenivangaalen · Jan 30

There are differences within the years. In Q3 2022, excess mortality was slightly higher than C19 mortality, as in Q2 2022 (and also Q4 2021). The causes of death for the 4th quarter of 2022 are not yet known. Mortality with and without corona:

Ruben van Gaalen @rubenivangaalen · Jan 30

In 2022, there were more deaths than expected in all age groups. EM was lowest among 50-64-year-olds (7%) and highest among people under the age of 50 (13%). Relative to 2021, EM was lower between 50 and 89 years, but higher in both the youngest and the oldest group.

Excess mortality by age

In the third quarter of 2022, a total of 1468 people died due to COVID-19. Untill sept/22 46258 deaths due to COVID-19 were registered. Total EM 2020-2022 is still slightly lower.

Ruben van Gaalen @rubenivangaalen · Jan 30

For other groups of causes of death, mortality in the 3rd quarter was largely comparable to previous years. Fewer people died of cardiovascular disease than in Q3/2021. The increase in natural causes of death is mainly due to increase in mortality due to accidental falls (trend).

1,468 COVID-19 deaths in Q3 2022

In the third quarter of 2022, a total of 1,468 people died due to COVID-19.

Ruben van Gaalen 🇳🇱 @rubenivangaalen · Jan 30

More research has to be done in order to test hypotheses on other effects on mortality than C19 (scaling back health care, effects on specific subgroups, incl. vaccins). About 10 projects are funded and more to come. Also incl data on vaccinations. @ZonMw [zonmw.nl/nl/over-zonmw/...](https://zonmw.nl/nl/over-zonmw/)

Van de 10 projecten die er gefinancierd zijn voor onderzoek is er geen een bij die onderzoekt of de vaccins invloed hebben gehad. Toch?
