Observational analysis #Covid19 Netherlands.

...

Calculated full year 2021 Corona mortality for the population over 85 years old is now validated by excess deaths over 2010-2019 lower quartile mortality weeks 1 through 52.

[mpidr.shinyapps.io/stmortality/](https://mpidr.shinyapps.io/stmortality/)

 NoCovid  Kano @falsel\_net · Jan 11, 2022

The Dutch herdimmunity strategy [rijksoverheid.nl/documenten/toe...](https://rijksoverheid.nl/documenten/toe...), originally planned for @ 60% Corona virus prevalence, could have rendered a total population excess mortality of 1 million citizens at a #SARSCoV2 Infection Fatality Rate (IFR) of 5.7% during 2021.

...

Whereas #SARSCoV2 mortality risk increases exponentially with Age, many analyses have been done after Log transformation of Fatality Rates.
